of ECE

## **Benefits of quizzes and tests in educational practices are -**

1. Testing identifies gaps in knowledge.
2. Testing causes students to learn more from the next study episode.
3. Essentially it reduces forgetting which makes the next related study area more productive.
4. Testing produces better organization of knowledge by helping the brain organize material in clusters to allow better retrieval.
5. Testing improves transfer of knowledge to new contexts.
6. Several experiments referenced in the paper where tests and quizzes help transfer and application of knowledge.
7. Surprisingly there are circumstances where quizzes or tests, particularly if delayed, can help people retrieve/retain information that was related to that asked but not actually asked in the questions.
8. Testing improves meta-cognitive monitoring – by giving students scores or self-assessments.
9. Testing prevents interference from prior material when learning new material.
10. If you have a test after learning one set of material before learning another set of material, it can make it less likely that the second session will.
11. Testing provides feedback to instructors and lets them know what is learned or not.
12. Having frequent quizzes and tests motivates study and reduces procrastination.
