

NARAYANA ENGINEERING COLLEGE::NELLORE

Permanently affiliated to JNTUA Ananthapuramu, Approved by AICTE,
Accorded 'A' grade by Govt. of AP, Recognized by UGC 2(f) & 12(B),
ISO 9001:2015 certified Institution, Approved with 'A+' Grade by NAAC

DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING

Report on "SAY NO TO CRAKERS – SAFE DIWALI"

ECE department has conducted awareness on Awareness on "Pollution Free Diwali" in association with AKHYANA (students association) on 26/10/2019. Students of II, III and IV Year B.Tech ECE students were participated in this event.

Celebrating Diwali and all other festivals without causing pollution is the direst need of the hour, if we don't celebrate them in eco-friendly way, we may not live to celebrate them for the years to come. All life forms adapt according to the existential challenges and difficulties, man included. Man has made his life so complex that he appears to have been lost in the labyrinths he unwittingly or wittingly woven around himself. One such labyrinth is the labyrinth of environmental degradation. It had never been so critical in the entire history of mankind as it is now. Man's thoughtless and short-sighted approach to life mingled with greed and avarice have brought the entire life on the brink of annihilation.

Everyone must change their life-styles, traditions, customs, festivals, and general ways of living in such a manner as don't interfere with the balance of environment any longer. Otherwise, life will cease to exist. Keeping the critical state of environment in mind, Diwali celebrations will have to undergo a drastic change. Till present time, Diwali is synonymous with pollution creating practices, such as bursting crackers by millions of people, candles, etc, send tons of toxic smoke into the already polluted environment, which further degrades it. In the 21st century Diwali, people will only use electric lights to light their houses. For crackers, some non-polluting alternatives will have to be replaced. Crackers that don't cause any pollution need to be invented. Crackers that go up emit light without any smoke. Crackers made of laser light can be a good replacement for the traditional bangers. Other traditions such as worshipping of goddess Lakshmi, eating sweets, exchange of gifts, etc., may go on unchanged. That's how the Diwali celebrations may undergo some changes in the days to come! Let's pledge to celebrate Diwali without causing any pollution for our own and our children's health and bright future.

Environmental pollution is the destruction of the environment. That is, the means of which our environment is corrupted due to which our environment is corrupted. Before this, due to its impact on humans and the natural world, we have to know and understand about it. Main types of environmental pollutants - air pollution, water pollution, noise pollution, thermal pollution, soil pollution and light pollution. Gradually the population of the world is growing, due to which people are cutting forests to make homes. Due to deforestation in these past 10-15 years, there have been many types of hazardous gas emissions in the earth. We live in such a beautiful planet Earth, the only planet where there is environment and life. One of the best ways to keep the environment clean is to keep water and air clean. But in

today's day, man has been doing all his work on the contrary, whose biggest pollution is in front of our eyes.

The Earth biosphere is a mixture of many types of oxygen, nitrogen, carbon dioxide, argon, and steam. All these things are very important for all the living beings. We have to keep the environment in accordance with the law to give the earth beautiful, clean and a better life for human beings. But the way human beings are flirting with nature, its hope is very little visible.

Students creating awareness on pollution free divali.
