

## **2. Electrical Designing:**

Department of EEE has conducted a value added program on Substation Designing for all interested EEE students from 21-2-2019 to 24-2-2019 by Sd.Hidythulla, Managing director in association with AMI Engineering and Infra in Edison Auditorium, Faraday's block, Narayana Engineering College, Nellore.

The role of electrical engineers is to build electrical frameworks and components to exact specs by taking into account certain factors like cost, reliability, sustainability, quality, and more. The changing world of technology and the increase in the usage of electronic gadgets, besides the growing use of automated manufacturing equipment are assumed to be the prime reasons supporting this growth rate of Electrical design engineers. So to have knowledge in electrical designing in this course they discussed about Engineering Fundamentals, Electrical Designing, Distribution, Service, Electrical Surges And Surge Protection.
