MEDICAL CAMP

Narayana Engineering College, Nellore organized a Medical Camp in association with Narayana Medical College & Hospital on 12-08-2013 at Padugupadu Village, Kovur, SPSR Nellore. Free medical camps are set up with a sacred aim to bring awareness amongst the villagers who have no access to basic healthcare services or knowledge about the diseases they are suffering from. These medical camps provide free medical advice, medicines to the Villagers and refer them for specialized treatment or surgery where ever it is required. These camps make sure that people get the healthcare at the right time, and see that doctor takes early care before a small health problem turns serious. Doctors from Narayana Medical College and Hospital conducted the camp which included general physical examination, Blood Pressure check up, BMI checkup, Head ache, treatment etc. Necessary medical advice and precautionary measures and medicines were provided to the villagers. 6 staff members and 48 students have participated in the event.

AWARENESS PROGRAM ON HIV AIDS

EEE Department of Narayana Engineering College, Nellore organized an Awareness Program on HIV Aids at Kovuru Village, Nellore. 1st December 2013 which is an international day dedicated to bringing awareness of the AIDS pandemic caused due to spreading of HIV infection and to mourn for those who have died of this disease. Government and health officials, non-governmental organizations, and individuals around the world observe this Aids day, often educating people on AIDS prevention and control. The theme of World AIDS Day focused mainly on children and young people. While the choice of this theme was criticized at one time by some for ignoring the fact that people of all ages may get infected with HIV, the theme helped alleviate some of the stigma surrounding the disease and to boost recognizing of the problem.

NUTRITION AWARENESS CAMPAIGN

ECE Department of Narayana Engineering College, Nellore organized an Awareness Program on Nutrition on 08-10-2013 at Zilla Parishad High School, Narayana Reddy Pet, Nellore. The objective of this program is to provide basic information on Nutrition to the students of the school. Proper nutrition is one of the most essential elements to being healthy and for living a long and healthy life. People deal with food every day, and food has been an essential part of life since the beginning of civilization. What we eat becomes our diet, and our diet plays a major role in deciding how healthy we are and how well our body functions. Without proper diet, our body cannot carry out the functions it needs to perform. Most people have some common knowledge on what is good and what is bad for the human body to consume. Fruits, vegetables, nuts, and grains are some common items which come to the people's mind when they think of healthy foods.

FISHERMEN SAFETY DURING CYCLONES

Our college is located nearer to the fish market. Number of fishermen use to come from nearby villages to sell their fish. At present, they are unaware of modern methods and equipments for safety during cyclone period. In order to maintain stability in their routine, they should be aware of better methods to save their lives and continue marketing even after a natural calamity like cyclone. Most of the fishermen come from Mypadu Village. Hence, we have chosen this village to conduct an awareness programme to those fishermen to suggest how to safeguard them when warning about cyclone is announced by the government.

Department of Electronics and Instrumentation Engineering has initiated and organized an awareness programme on “**Fishermen Safety during the cyclones**” on 13.07.2013.

The faculty advised the fishermen about

- To Keep boats/rafts properly tied up in a safe place
- Not to venture in to the sea when natural calamities are announced
- Keep doors and windows shut
- Listen to/ rely on official warnings
- Drink boiled/ chlorinated water
- Seek a safe shelter as soon as possible
- Lock the homes, switch off power, gas, water connections/points, and keep emergency kit with them.

The faculty discussed the inherent difficulties explaining the causalities and precautionary measures to be taken during cyclones. Also awareness on different life saving mechanisms was explained to them.

AWARENESS PROGRAMME ON DENGUE FEVER

It is observed in the surrounding areas of our college that stagnant water/lack of cleanliness, poor water storage practices, sanitation practices, water-collection habits and drainage systems gives a chance particularly to multiply Dengue - causing mosquitoes. It warned us about villages where the people don't take proper cleanliness measures in their surroundings.

Hence, we have chosen Buchireddypalem, a village which is considered as peri-domestic site. An awareness program was conducted at Govt. High school on 23-11-2013 in this place. Our department has brought awareness on the causes of these diseases, symptoms, breeding places of mosquitoes and the preventive measures to be taken through the activities carried out to protect themselves from mosquito bites.

Faculty suggested the school students, to wear long-sleeves and full pants to cover arms and legs, Use mosquito nets while sleeping. Not to allow rain water to stagnate in and around their houses, in the garden, on the roads or lanes near residing places, etc. Make water puddles in and around your area to develop or create non-mosquito conditions by covering them with sand or dousing them with petrol/ kerosene or insecticides. Also ensure that the drains are covered and not to allow over- flowing. This health education will help transfer knowledge to rural people and it can help establish sound knowledge about Dengue Fever prevention and in creating healthy life style practices for society as a whole, because "Prevention is always better than cure".

AWARENESS PROGRAMME ON ACCIDENT PRONE ZONES

Our college is located near to high way, and we know that many people met with road accidents on high ways/road junctions. The main reason behind the increasing trend of road accidents, resulting in injuries and deaths, is lack of discipline and awareness among the drivers. Other reasons are: increasing population, the increasing number of vehicles on the roads, and the resultant congestion.

Eenadu press is very near to our college and there is a junction which connects the city and the high way. Hence, as responsible citizens of Department of Management, Narayana Engineering College, Nellore has initiated an “awareness programme on accident prone zones on 21-11-2013 to create awareness on road safety issues for drivers of different specific type of vehicles.

Staff and students participated in the whole programme. The main preaching to the drivers in the programme was:

- The need for wearing helmet for both, the riders and the pillion riders
- Not to use mobile phones while driving
- Not crossing Zebra Lines at signals or stopping vehicles on Zebra lines
- Signal jumping or avoiding signal jumping
- Wearing of seat belts
- Not to drive in drunken stage
- Not to overtake dangerously
- Not to drive unless perfect vision
- Not to violate other traffic rules.

The programme was successfully conducted with 12 staff members and 150 students.
